<p>Kuznetsov, A. Ya. ELECTRICAL CONDUCTIVITY OF GLASSES OF THE <math>\text{Li}_2\text{O}-\text{SiO}_2</math> SYSTEM. Aug 60, 7p. 6 refs. Order from LC or SLA m\$1.80, ph\$1.80 60-18930  Trans. of *Zhurnal Fizicheskoy Khimii (USSR) 1959, v. 33, no. 7, p. 1492-1494.  The electrical conductivity of eleven <math>\text{Li}_2\text{O}-\text{LiO}_2</math> glasses was measured. The content of lithium oxide in the glasses varied from 7.9 to 42.57 mole %. Electrical conductivities varied from <math>10^{-11}</math> to <math>10^{-11}</math> mho/cm. The conductivity changes exponentially with the composition; the isotherms undergo a break in the composition range which corresponds to lithium disilicate. Industrial grades of high conductivity glasses can be developed from glasses of this system.  (Materials--Ceramics, TT, v. 5, no. 2)</p>	<p>60-18930 1. Glass--Conductivity 1. Kuznetsov, A. Ya.
